DigitalSelf Token Private Swap Guide

The DigitalSelf Token Private Swap Dapp or “Dapp” is created to allow private investors to purchase DigitalSelf Token (“DSF Token”). This Dapp will only be available during the private sale period and will be taken down once it ends.

I. Go to DigitalSelf Token Private Swap

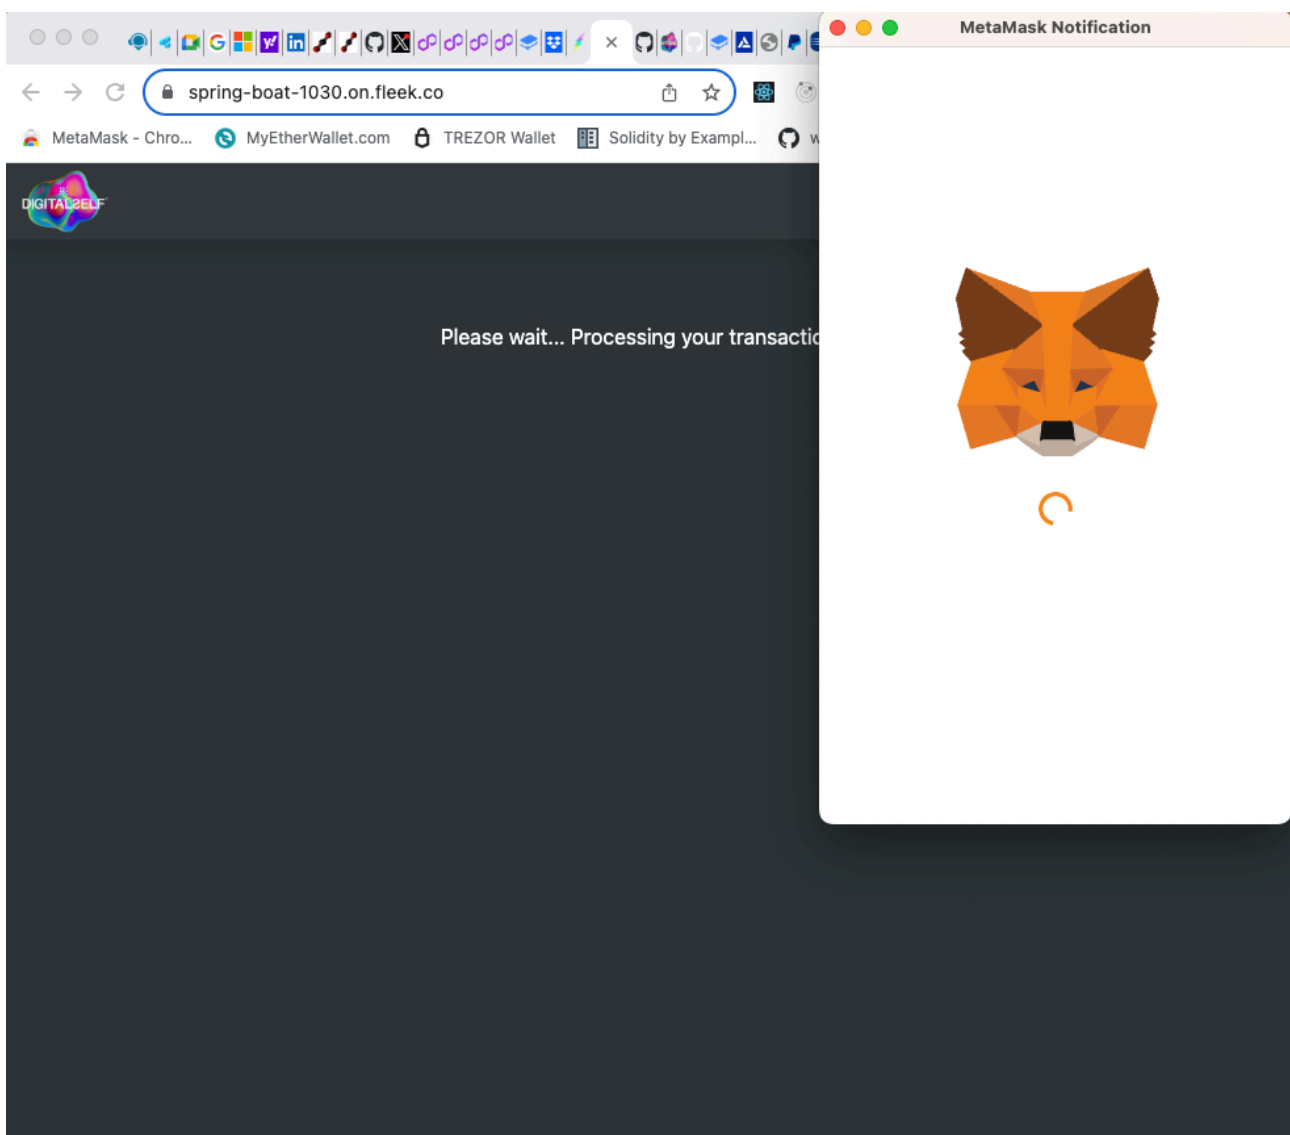

Visit the DigitalSelf Token Private Swap page at: <https://spring-boat-1030.on.fleek.co/>

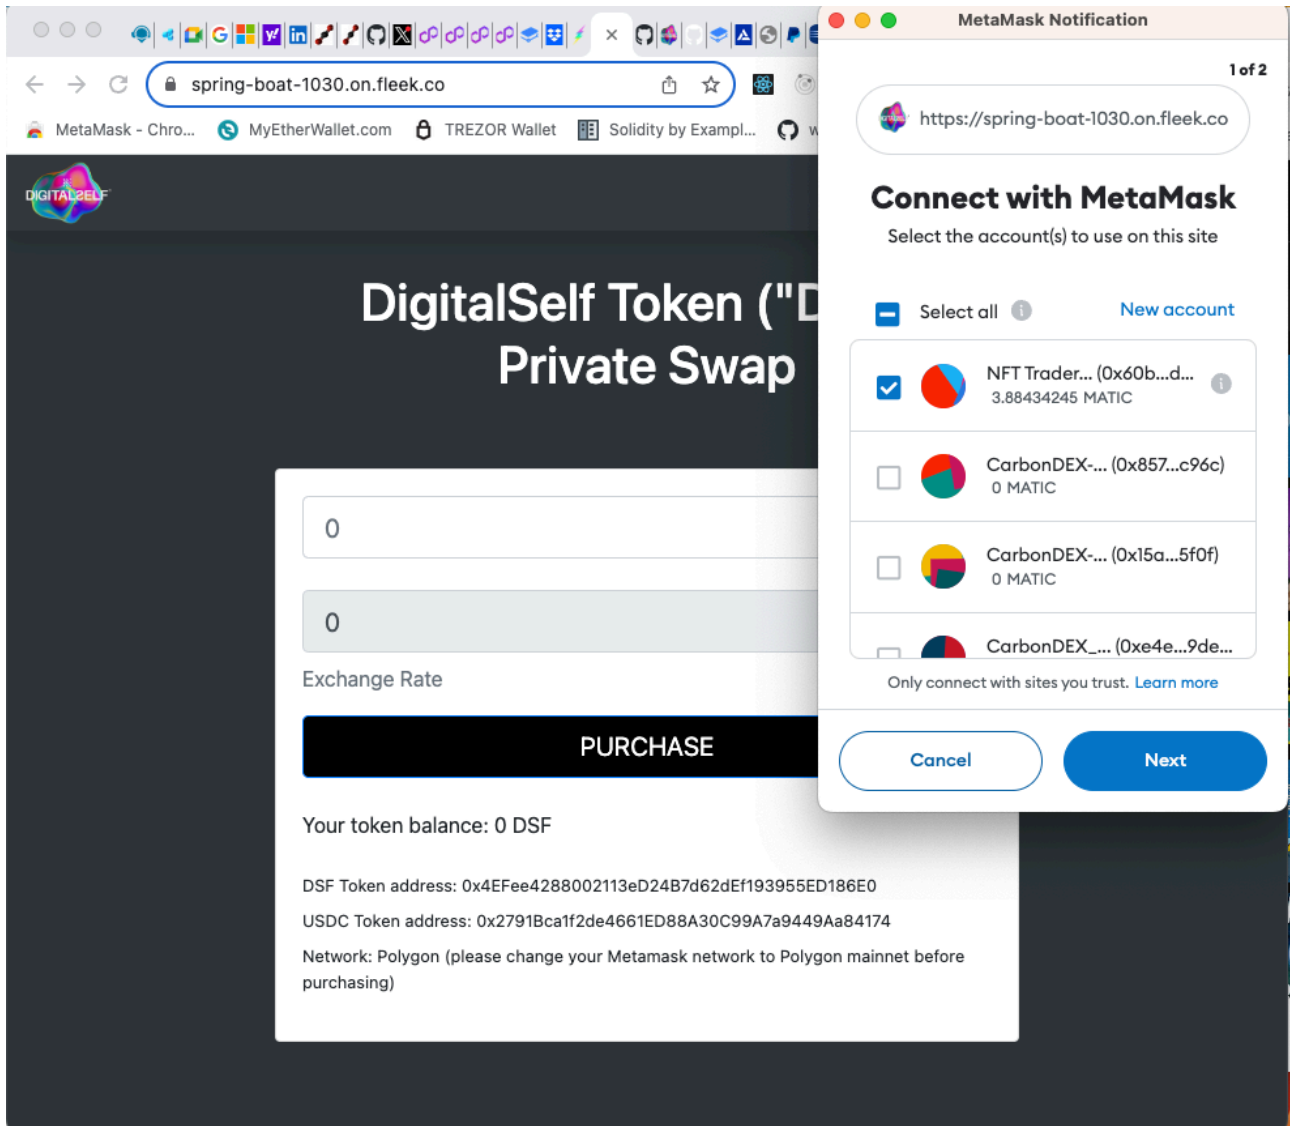

II. Connect to Metamask

The Dapp only works with Metamask wallet. You can install Metamask desktop wallet on your Chrome browser by clicking on this link: <https://chrome.google.com/webstore/detail/metamask/nkbihfbeogaeaoehlefnkodbefgpgknn?hl=en>, you can also download the Metamask mobile app from both the Appstore (IOS) or Playstore (Android).

Click on the 'Connect' button, before you do this please make sure that you have changed the network in your Metamask to the Polygon network. You can refer to the instruction here <https://www.coindesk.com/learn/how-to-connect-metamask-to-the-polygon-network/> if you haven't added Polygon network to your Metamask.

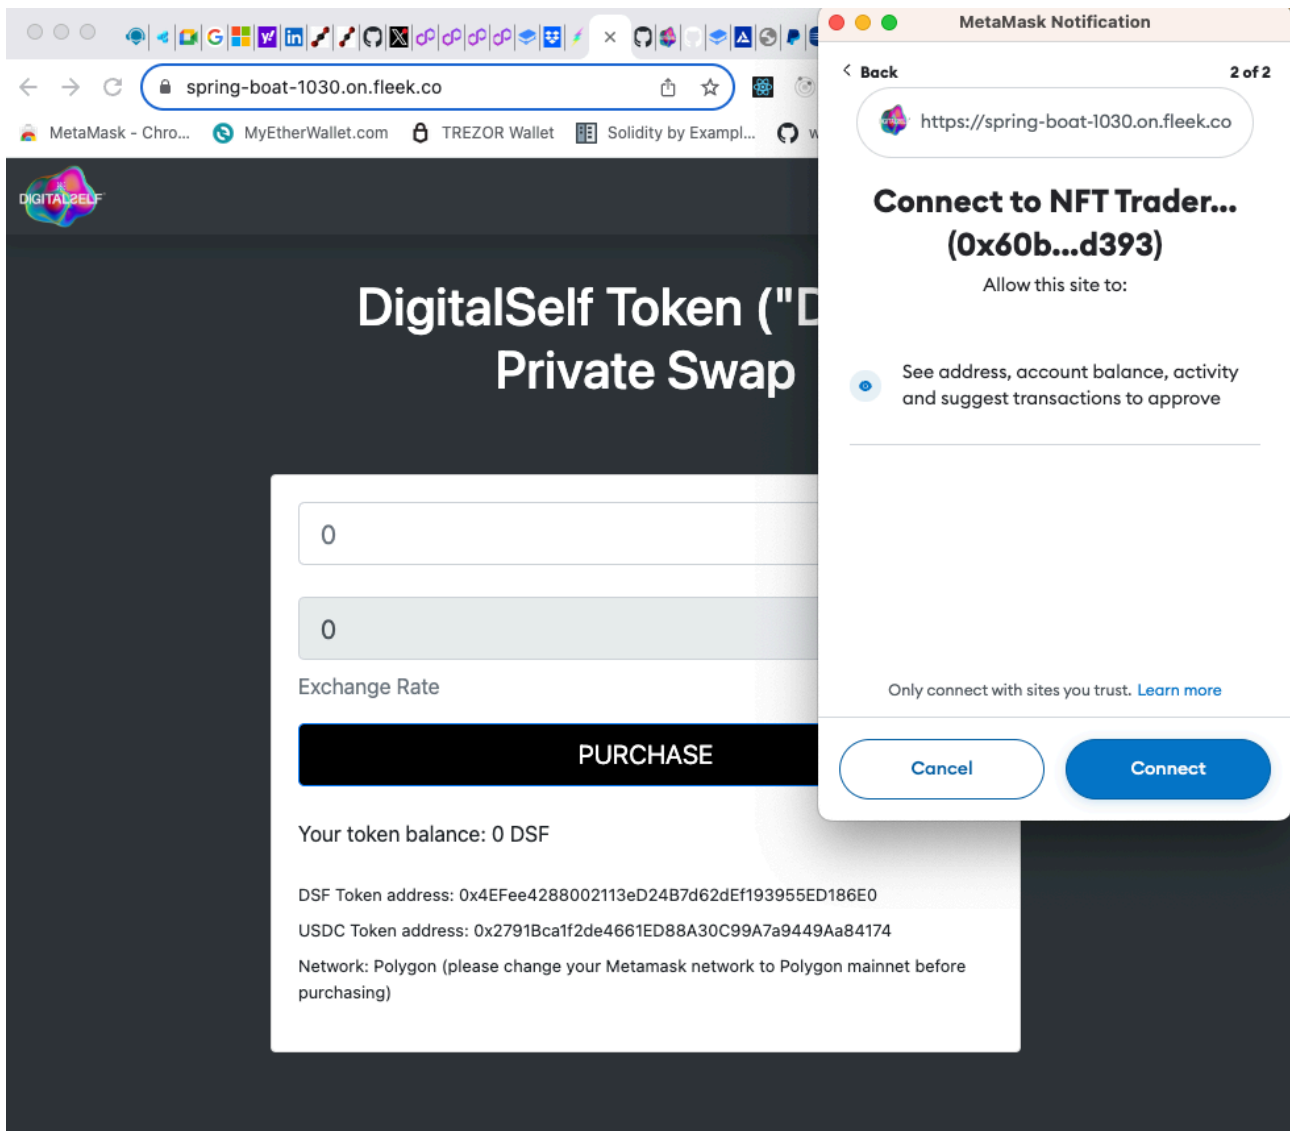

III. Choose your Metamask wallet to connect to the App.

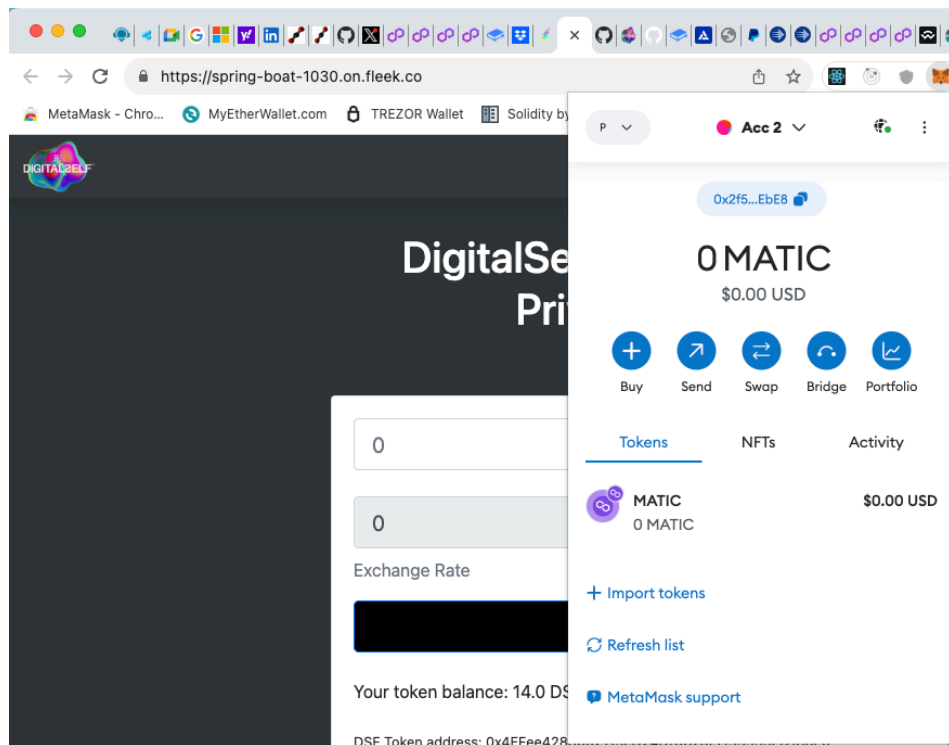

IV. Connect your Wallet

Click on the 'Connect' button to connect your chosen wallet to the App.

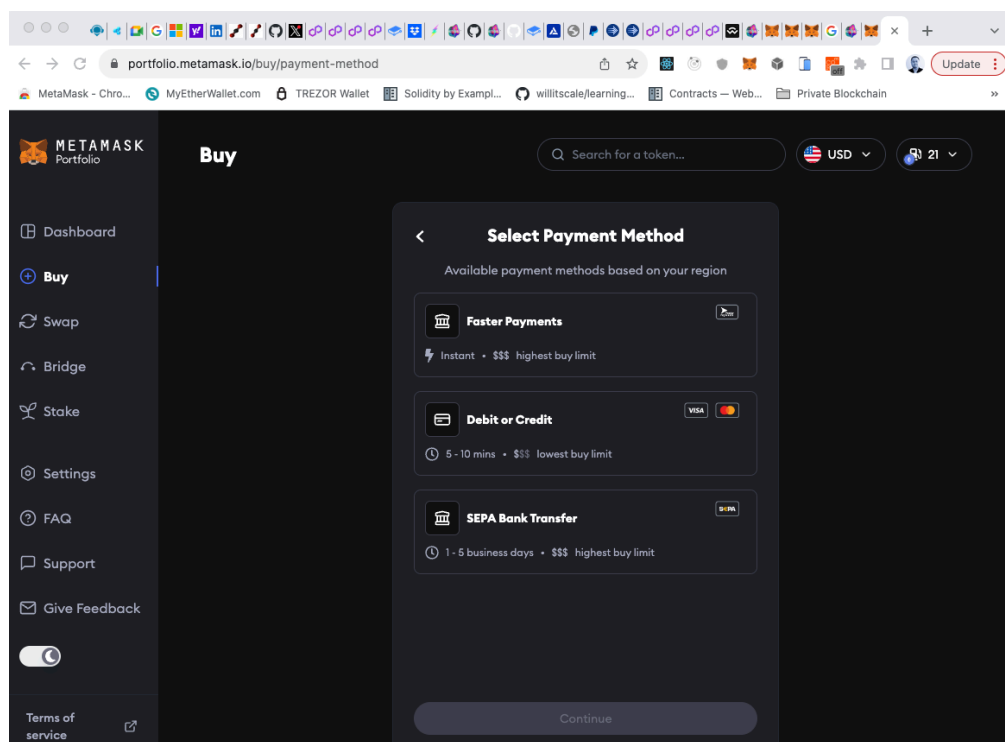

Note:

Since you are on Polygon network, you will need MATIC tokens to pay the gas fee. If you do not have MATIC, you can purchase those by clicking on the 'Buy' button as shown below:

This will take you to the portfolio.metamask page: <https://portfolio.metamask.io/buy/region> where you can buy MATIC tokens by using your credit or debit card, bank transfer etc., depending on where you are located.

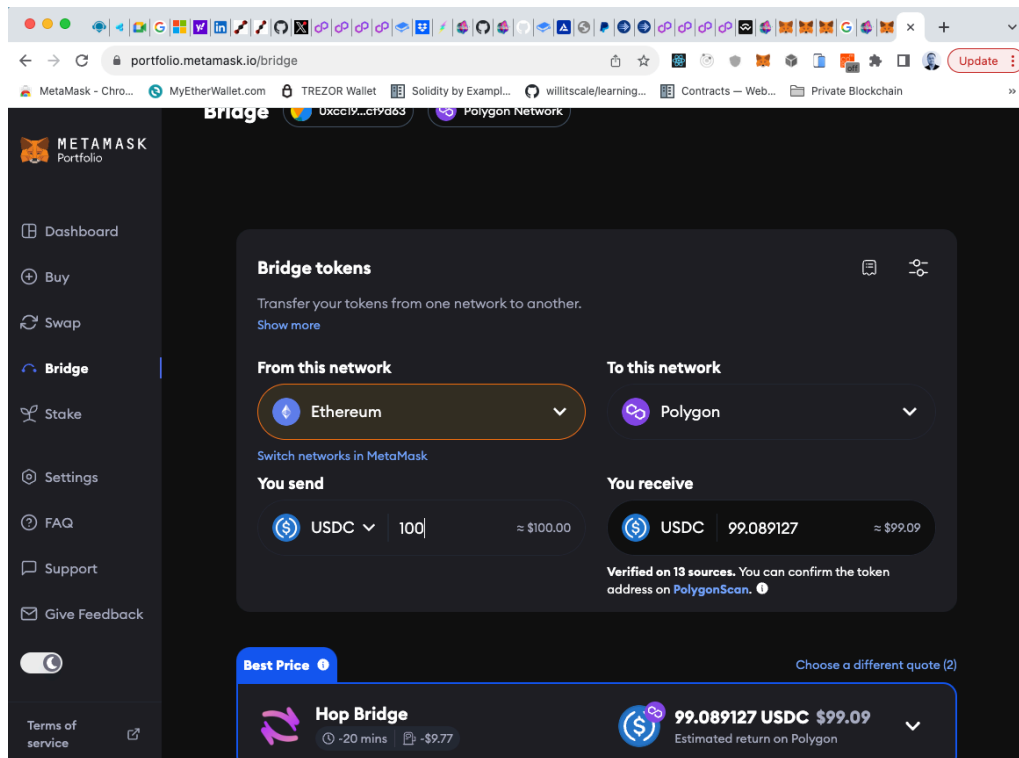

Since the Polygon network is very gas efficient, you only need about US\$5 worth of MATIC.

The DSF Token Private Swap Dapp only allows you to swap USD Coin (PoS) i.e. the USDC token on the Polygon network : <https://polygonscan.com/token/0x2791bca1f2de4661ed88a30c99a7a9449aa84174#readProxyContract> with for DigitalSelf Token, <https://polygonscan.com/token/0x4efee4288002113ed24b7d62def193955ed186e0#balances>.

If you do not have any USDC token on the Polygon network, you can purchase USDC by using the portfolio.metamask app.

or,

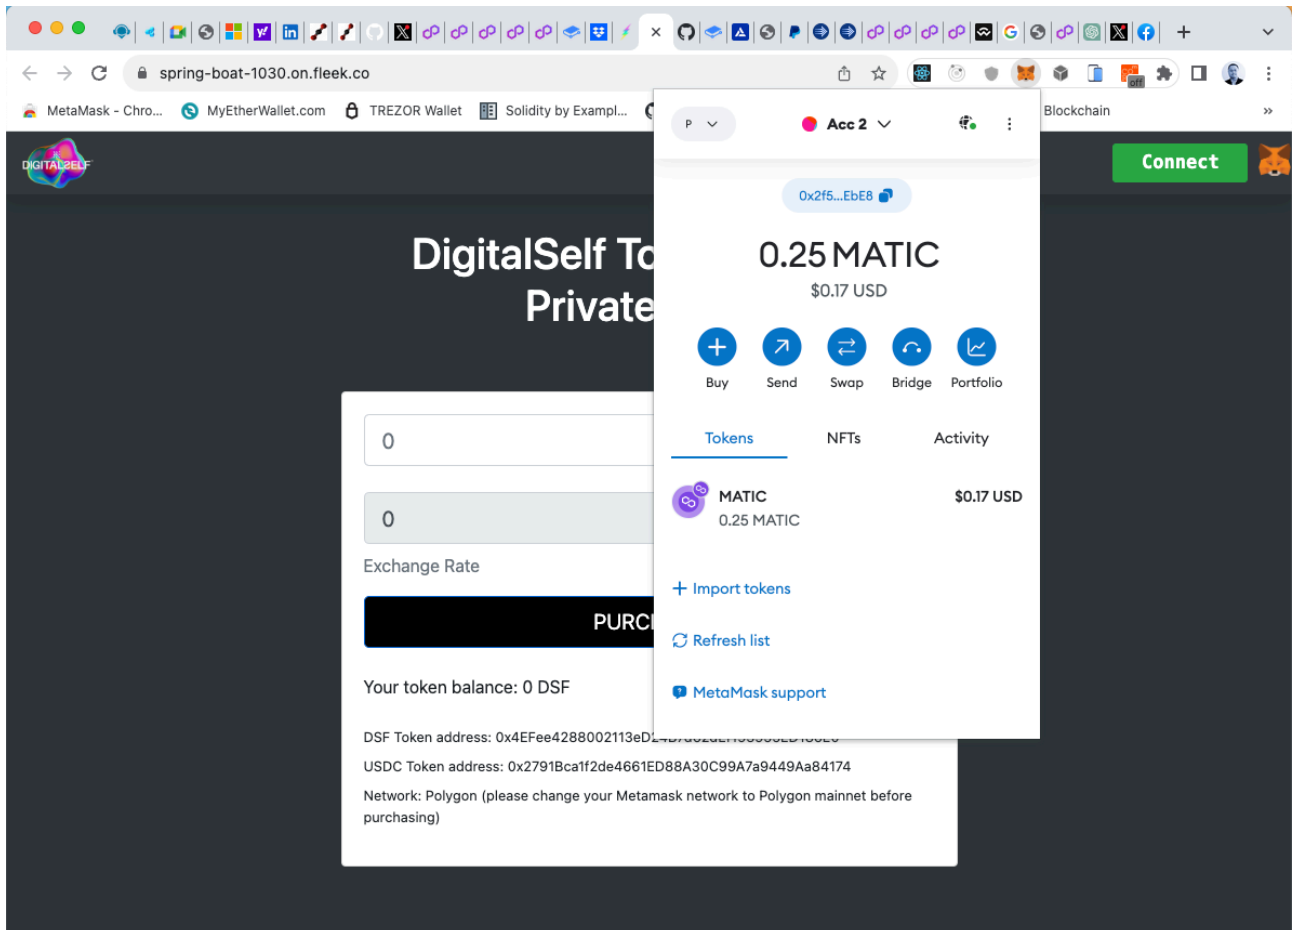

If you have USDC on another network i.e. Ethereum, you can use the 'Bridge' function on portfolio.metamask app to convert the token into a USDC token version on the Polygon network, as shown below:

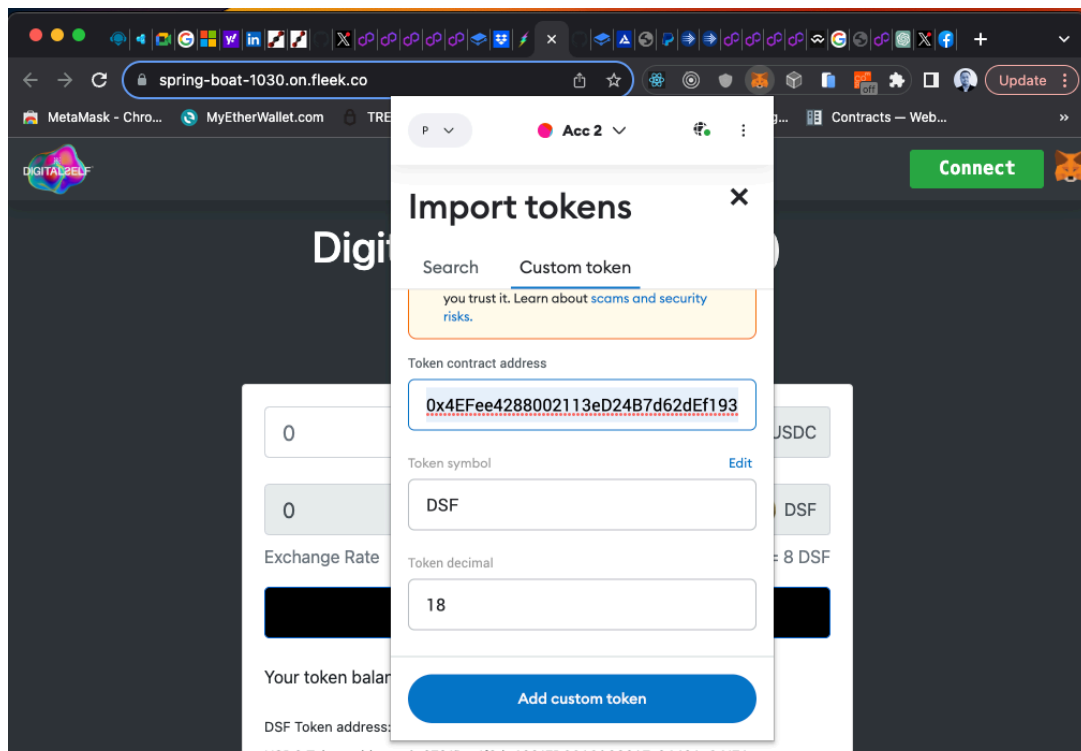

V. Import DSF Tokens into your Metamask

Before you purchase the DSF tokens you will need to import the tokens into your Metamask Wallet.

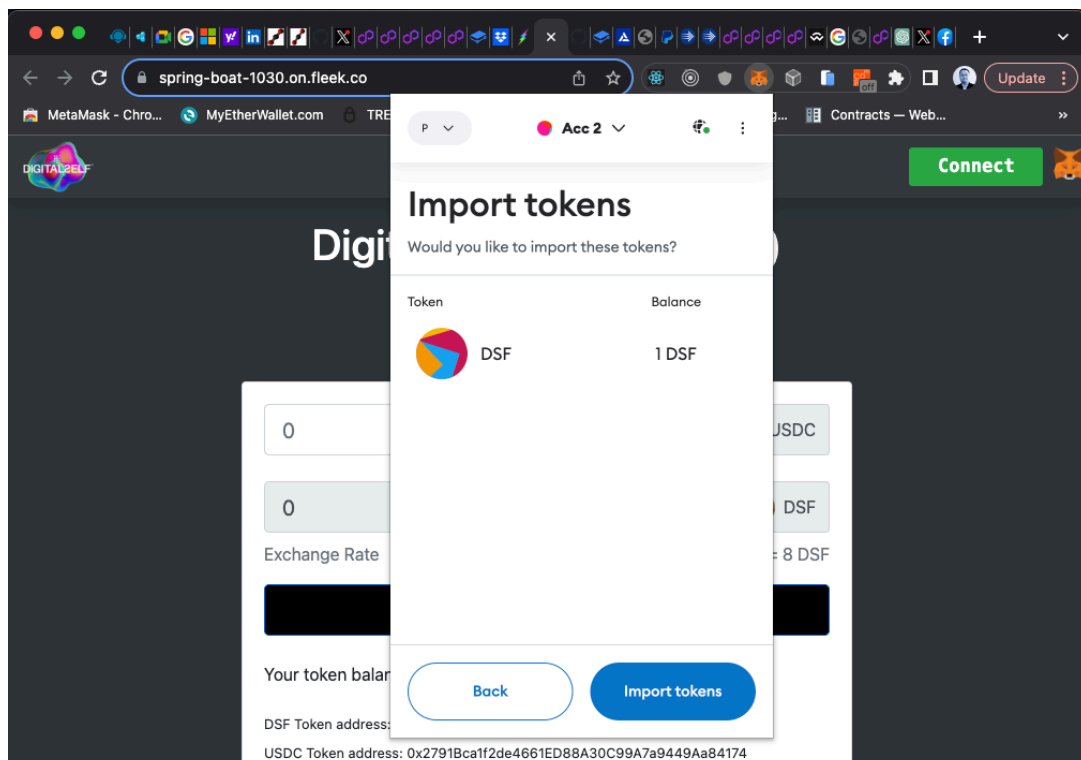

Click on the '+ import tokens' as shown below:

Click on the 'Custom tokens' tab and copy and paste the DSF token address:
0x4efee4288002113ed24b7d62def193955ed186e0

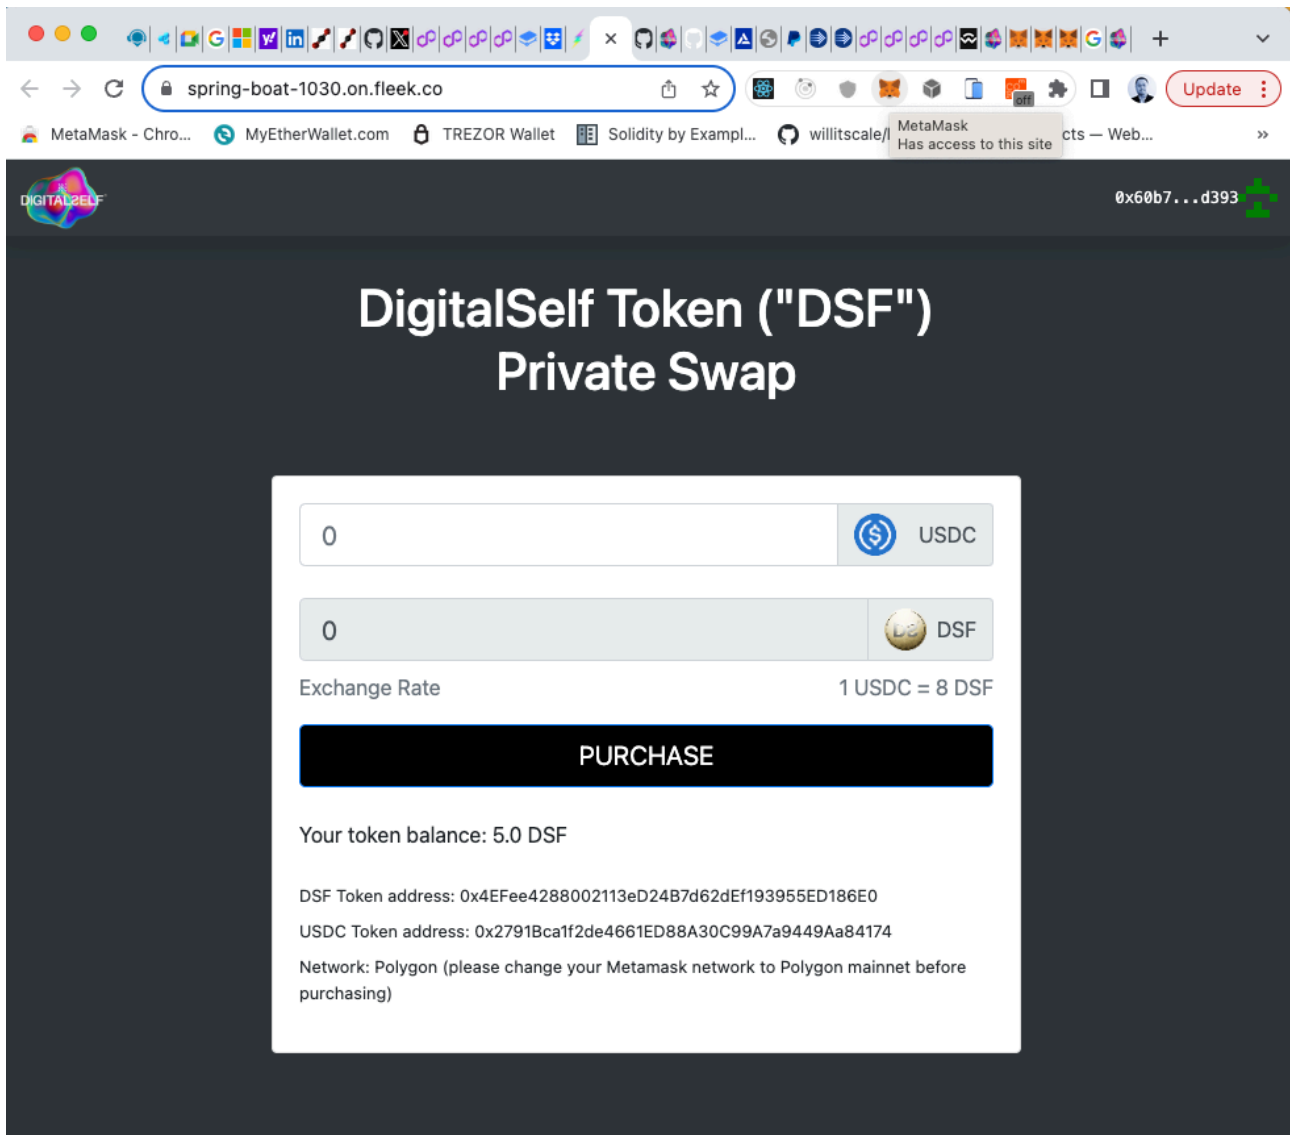

and finally, click on the 'Import tokens;' button to complete the token import process.

VI. Login Status

Once you see your wallet address on the top right of the page, it means your Metamask wallet are now connected to the Dapp.

VII. Enter the amount to swap

You can enter the amount of USDC that you want to swap for DSF. You can also see your current DSF token balance in your wallet. Click on 'PURCHASE' button once you have enter the desired USDC amount.

The screenshot shows a web browser window with the address bar displaying `spring-boat-1030.on.fleek.co`. The browser's address bar and tabs are visible at the top. The main content area has a dark background with the DigitalSelf logo in the top left corner and a wallet address `0x60b7...d393` in the top right corner. The central heading reads "DigitalSelf Token ('DSF') Private Swap". Below this, there is a white box containing the swap interface. The interface includes a text input field with the value "0.125" and a dropdown menu set to "USDC". Below this is another input field with the value "1" and a dropdown menu set to "DSF". The exchange rate is displayed as "1 USDC = 8 DSF". A large black button labeled "PURCHASE" is positioned below the exchange rate. At the bottom of the white box, the text "Your token balance: 5.0 DSF" is shown. Below this, the DSF Token address is listed as `0x4EFee4288002113eD24B7d62dEf193955ED186E0`, and the USDC Token address is listed as `0x2791Bca1f2de4661ED88A30C99A7a9449Aa84174`. The network is specified as "Polygon (please change your Metamask network to Polygon mainnet before purchasing)".

0.125 USDC

1 DSF

Exchange Rate 1 USDC = 8 DSF

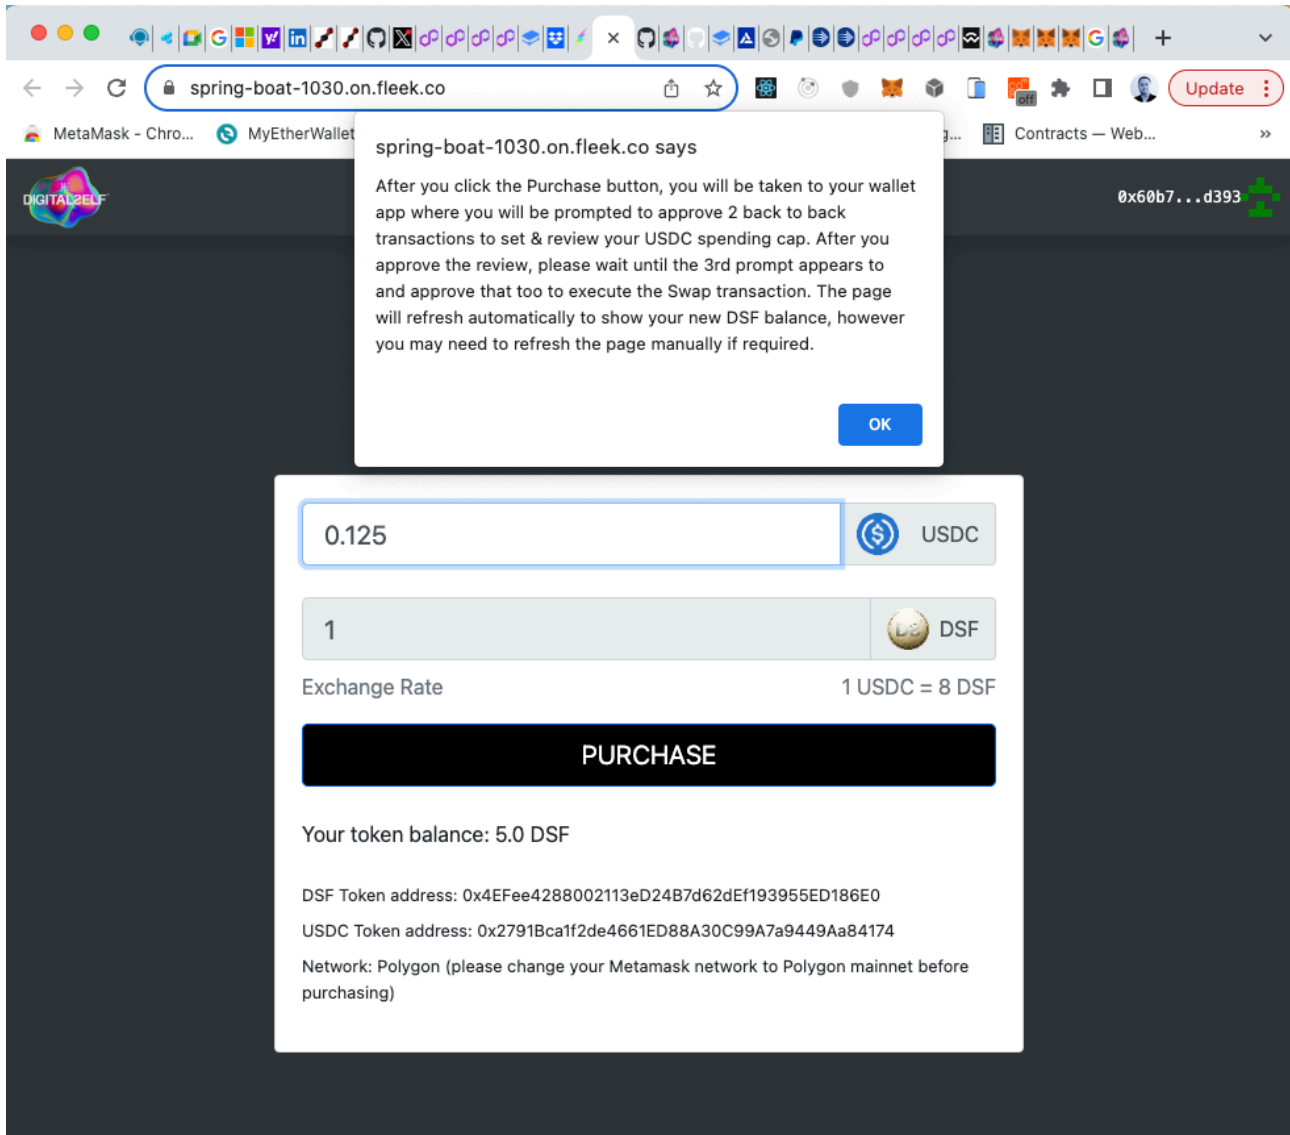

PURCHASE

Your token balance: 5.0 DSF

DSF Token address: 0x4EFee4288002113eD24B7d62dEf193955ED186E0
USDC Token address: 0x2791Bca1f2de4661ED88A30C99A7a9449Aa84174
Network: Polygon (please change your Metamask network to Polygon mainnet before purchasing)

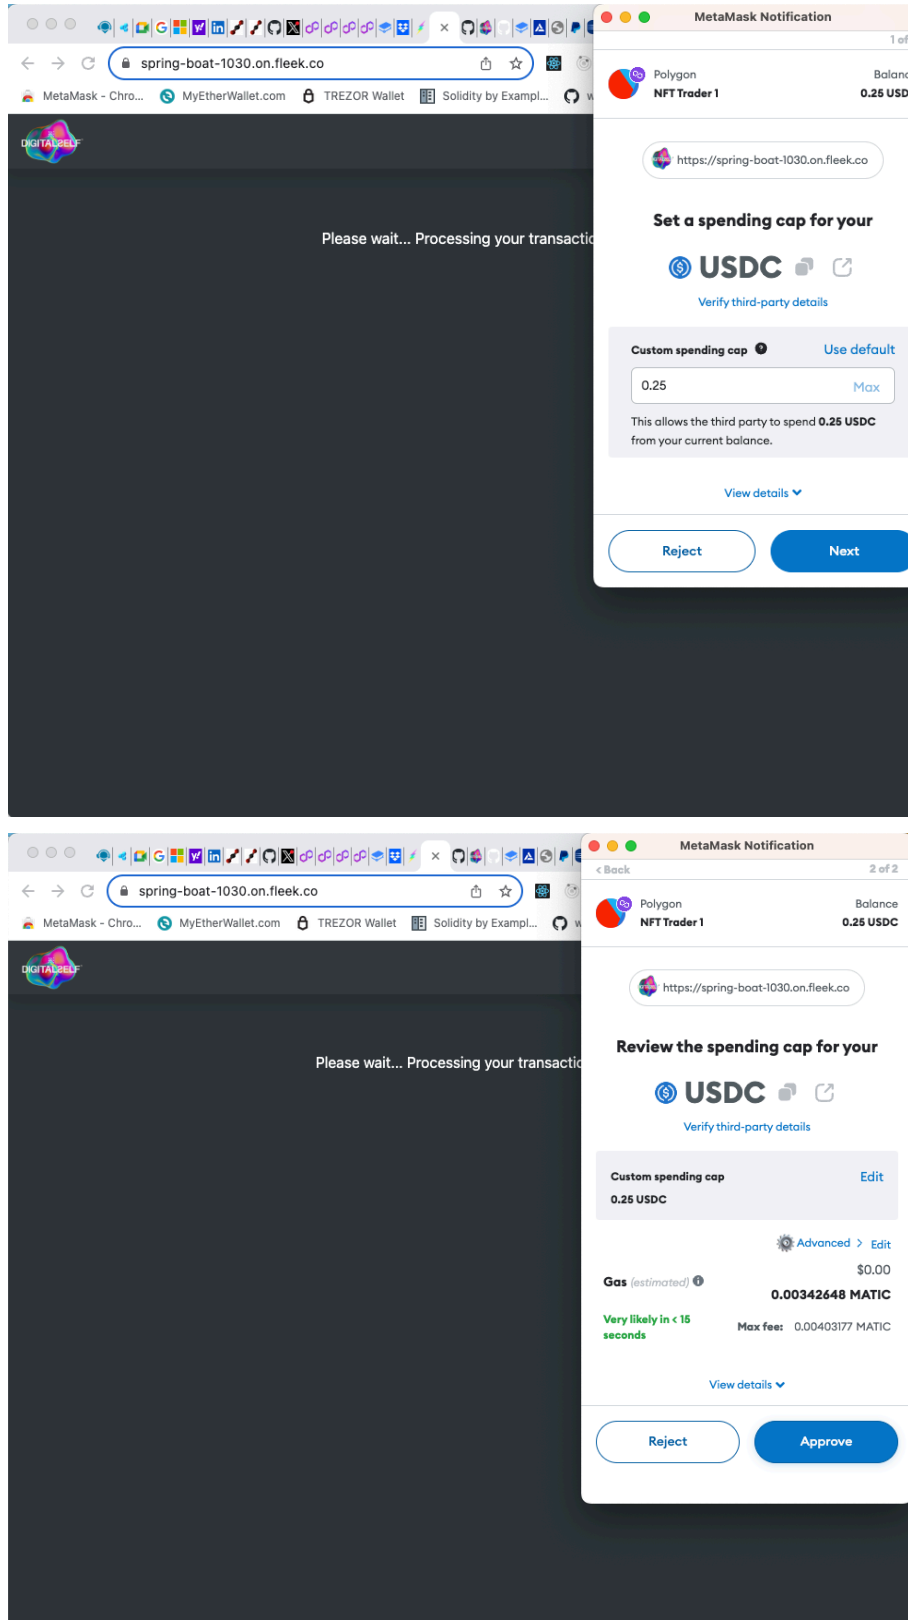

VIII.Next Steps Instruction

This instruction explains the process to complete the swap transaction. Click on 'OK' button to proceed.

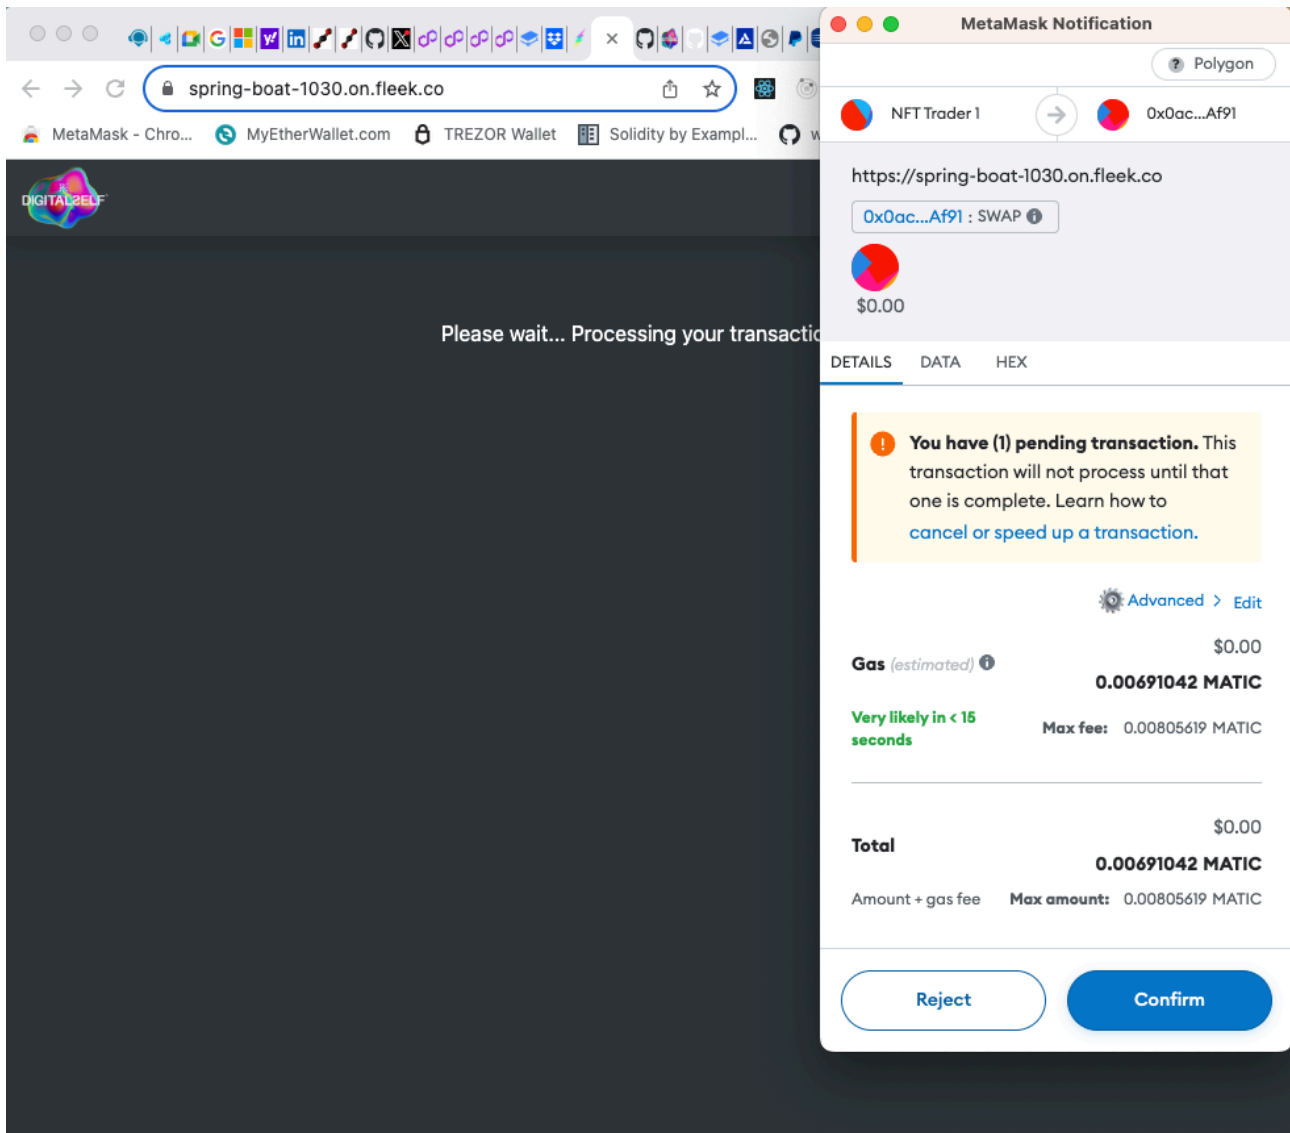

IX. Set & Approve the USDC spending limit

Metamask will require users to set & approve the spending cap or limit for their USDC token before it can be transacted. Users will be prompted as shown below, please enter the spending cap amount, click 'Next', wait for the second prompt and click the 'Approve' button.

X. Confirm the Swap

After the USDC spending limit has been approved, the prompt to execute the swap will come up, please click the 'Confirm' button to complete the swap transaction.

XI. Page Refresh

Once the swap transaction has been executed and confirmed on the Polygon network, the Dapp page will automatically refresh, and your updated DSF token balance will be shown. If this took more than 5 - 10 minutes you can manually refresh the Dapp page.
